

1. DOH suggestions for representative cores.

We suggest, it would be a representative suit of cores. RHMW13 & RHMW14 for the NW side. RHMW01R, RHMW03 & RHMW 08 for center ridge line. RHMW09 & RHMW 10 for SE side. RHMW14 is recommended because the drill hole entered basalt with elevated GW level above the basal water table. RHMW 11 or RHMW 16 are also recommended.

If time permits, then RHMW12A, since it is similar to RHMW16 but across the valley and has brackish water.

2. DOH's brief plan to brief Moanalua Tunnel and Quarry.

Please refer to the timetable for SME's who will be briefing these sessions. This session intent to cover as many Hawaiian Geological/Hydrogeological aspects in the Moanalua Tunnel and from the Quarry outcrops. For a start, we recommend reading the presentation shared by Dr. Rowland and DOH response on TWG meeting 41 summaries.

3. DOH comments, list of attendees (priority per session), list of presenters, recommended change in timings is in tables on Page 2 & 3 (below).
